1972

Custom-designed computer vision systems are being applied to specific manufacturing tasks. Current development may lead to general-purpose systems for a broad range of industrial applications.

Computer Vision Today

None

RL 150.4 RW 84

ade None 59% Y

Industrial Computer Vision

Great computing demands

Low latency

High profit margin

New opportunities every day

Application Development

Multidisciplinary

Uncertain

Closed market

Incomparable results

Single use components

Goals

General Purpose Computer Vision
System

Reusable parts

Comparable results

Wide Spectrum of applications

Based on Open Source

Requirement Analysis

System on Chip

Biometric System on Token

Texas OMAP4 SOC

FPGA

Fingerprint Acquisition System

Virtex 4 FPGA

CPU + GPU

Bidimensional Interferometer

Nvidia Tesla GPU

System on Chip Computer Vision System

Application: Fingerprint matching

Hardware: Nokia N800 based on Texas Instruments OMAP 3 SOC

Software: NBIS fingerprint processing software

Goal: 2 seconds per transaction

System on Chip Computer Vision System

Pros

Auditable Open Source stack

Integrated DSP

Mature API

COTS Hardware

Cons

Small selection of sensors

Limited computer resources

Non updatable hardware

No direct access to the sensor

FPGA Computer Vision System

Application: Acquisition of fingerprints in 3D

Sensor: Vector BCI 6 Mpix Mono

Hardware: Custom System based on Virtex 4 FX FPGA

Software: Custom Linux Distribution

Goals: Low latency auditable

FPGA Computer Vision System

FPGA Computer Vision System

NIJ | *National Institute
of Justice*

Used on real life

FPGA Computer Vision System

Pros

Image Preprocessing Capabilities

Low level access to the sensor

Open Source Stack

Cons

Highly coupled to the selected sensor

Low Performance CPU

Custom sensor API

No Image Processing Software Stack

Slow Development Cycle

GPU + CPU Computer Vision System

Application: Atmospheric research

Hardware: x86 + NVIDIA GPU

Software: C+CUDA

Goal: real time processing

GPU + CPU Computer Vision System

GPU + CPU Computer Vision System

Pros

Great computing power

High level of parallelization

200x faster than reference
implementation

Simple programming (C based)

Cons

Lack of Computer Vision Stack

No image preprocessing

Highly coupled to the selected sensor

Nvidia specific programming language

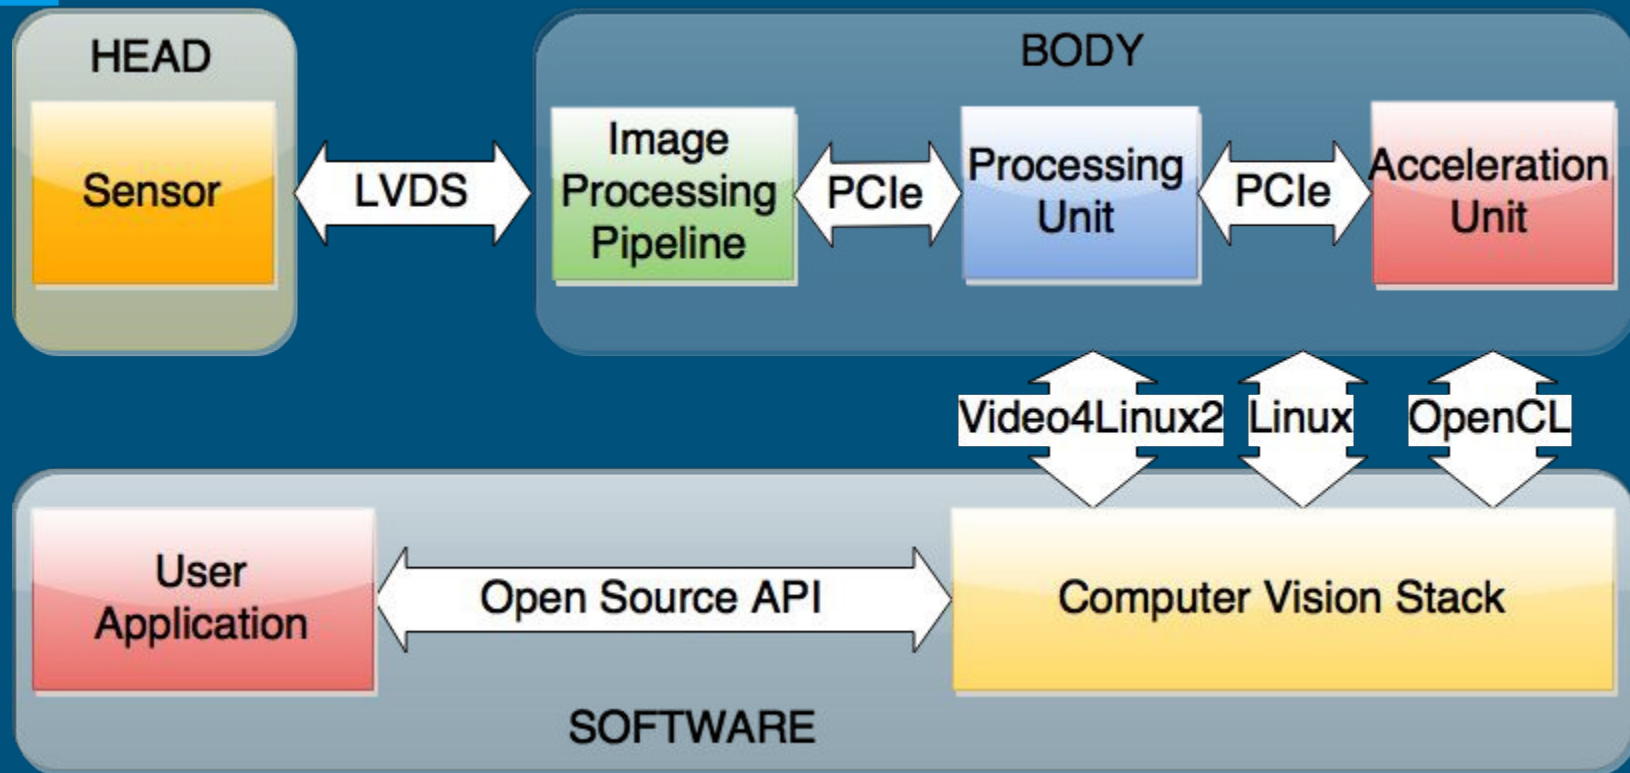

Used on real life

Generic Computer Vision System

Original Contribution

Modular Structure

QT5022

QT5022: head

CCD: 1, 3 and 5 sensors

CMOS: 2, 4, 8 and 12 Mpix

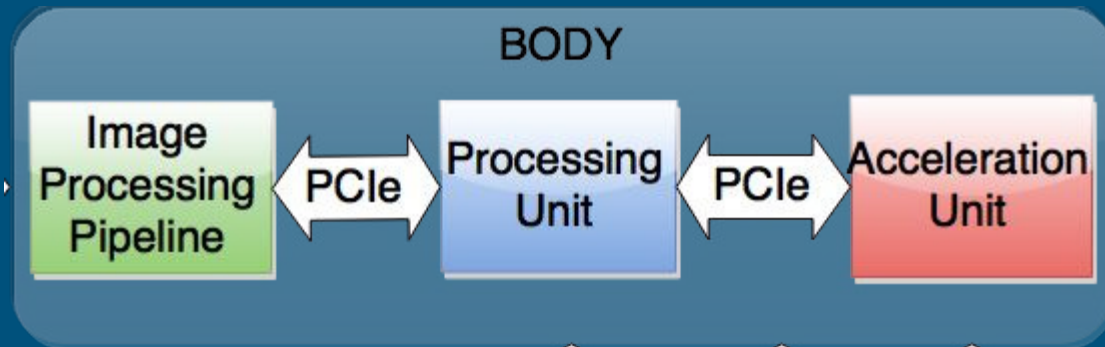

Roic: InGaAs and microbolometer

Dual eye: CMOS

SONY 
image sensors

Hardware

QT5022: body

Image processing pipeline:

Spartan 6 / Kintex

Processing unit: AMD APU

Acceleration unit: GPU

Hardware

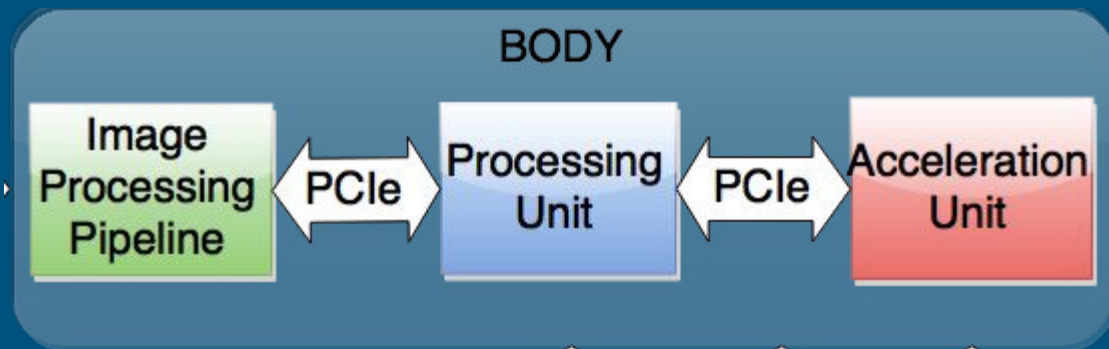

Image Processing Pipeline

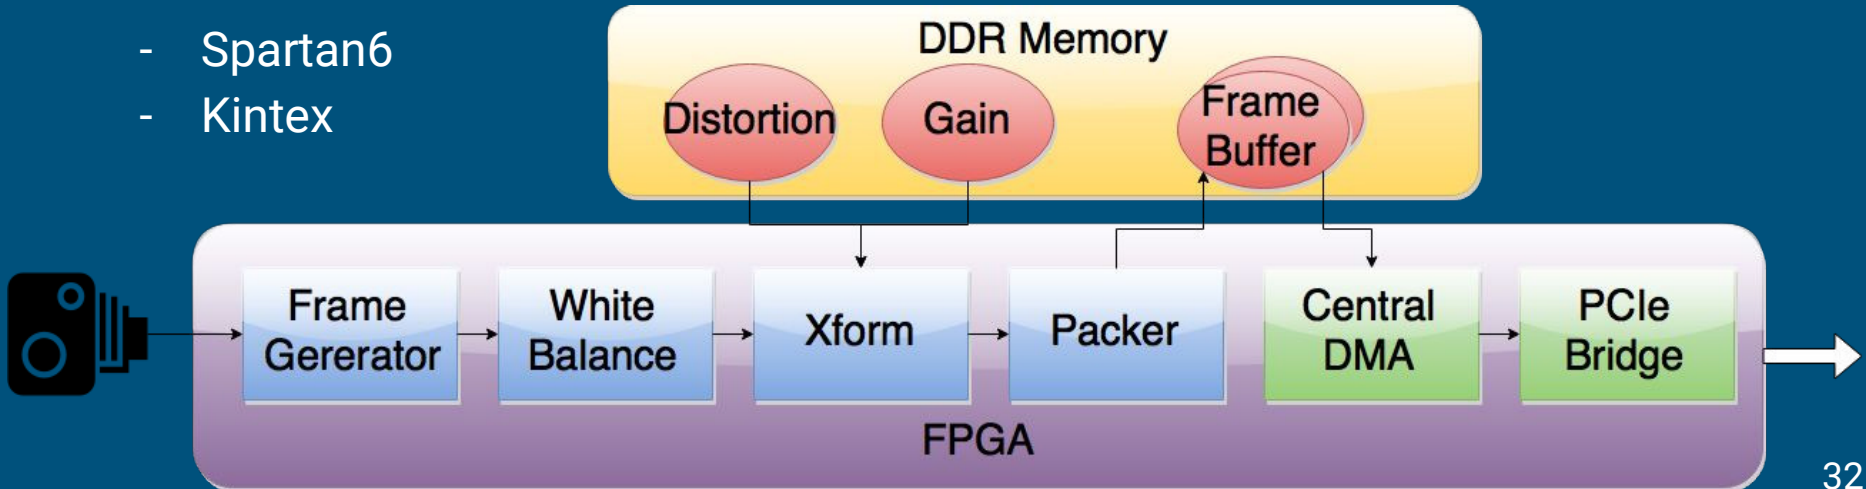

PCIe interface to the Processing Unit

Plenty of resources available

2 implementations:

Reconfigurable

- Spartan6
- Kintex

Frame Generator

Sensor Abstraction

Synchronization

Data readout

Debayer

Fixed Pattern Noise

XForm

Original Contribution

Data Packer

Hardware

Processing Unit

AMD APU G-T65N:

- 2 x 1.65 GHz x86 cores
- 1x Radeon 6320 GPU

Memory: 4 GiB DDR2 RAM

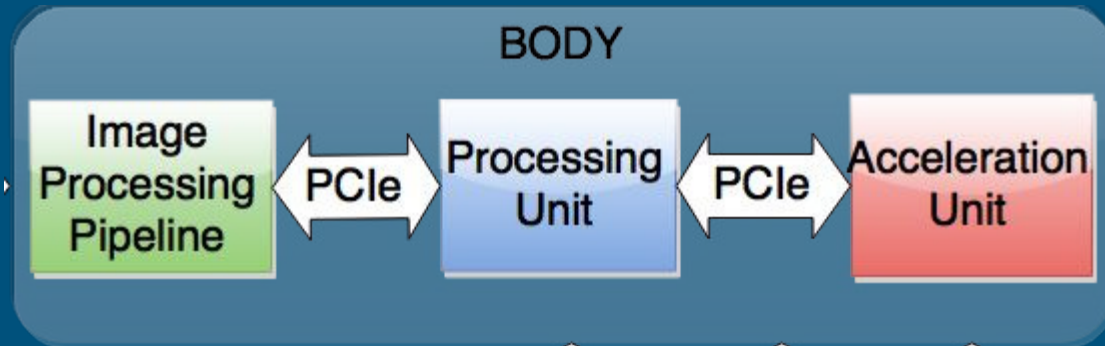

Dual Port Intel Gigabit Ethernet

Fintek Serial Port

Custom Hardware Monitor

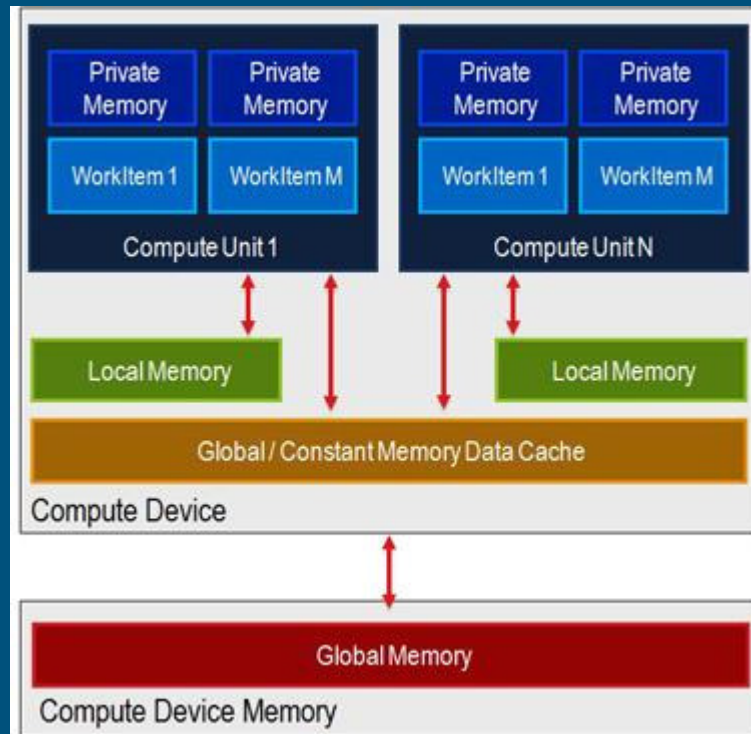

Hardware

Acceleration Unit / OpenCL

Massive number of threads

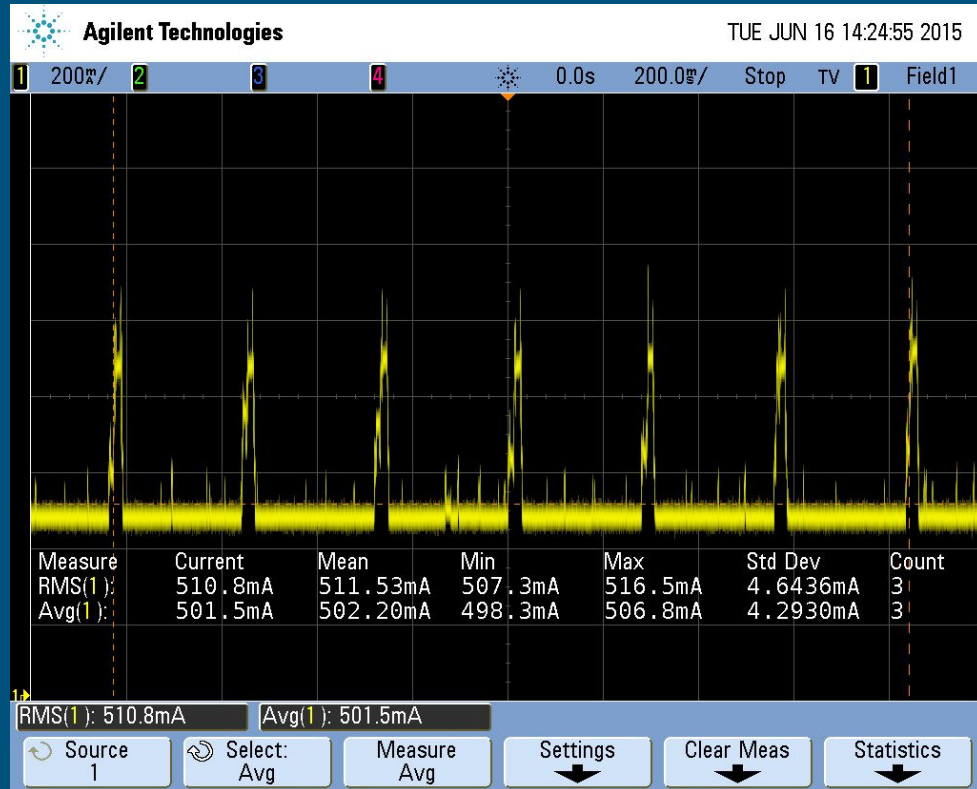

Hardware agnostic: Implemented
by GPU, DSP, CPU or FPGA

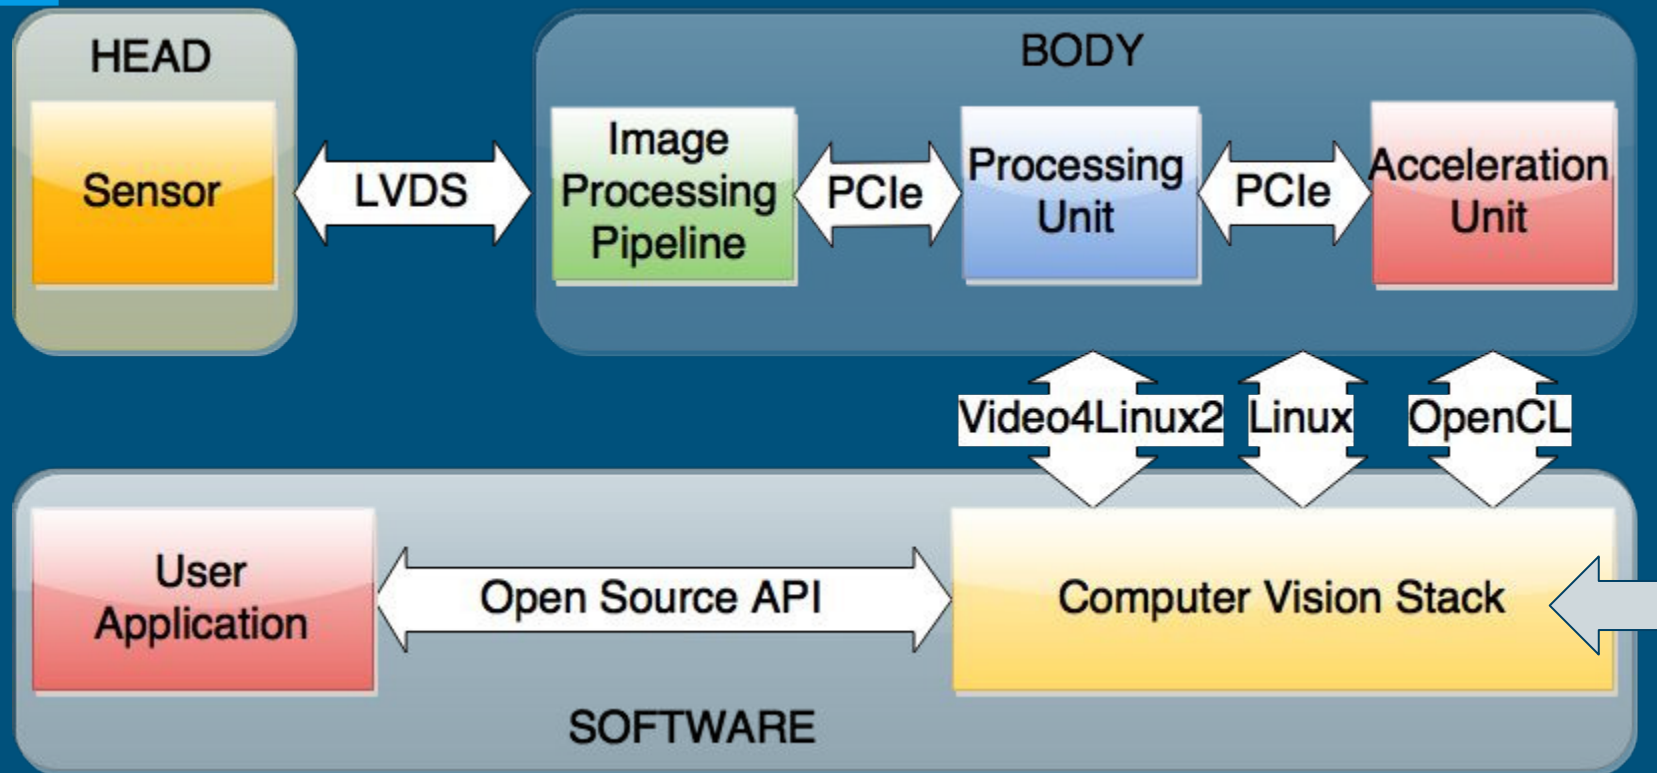

Acceleration Unit

Acceleration Unit

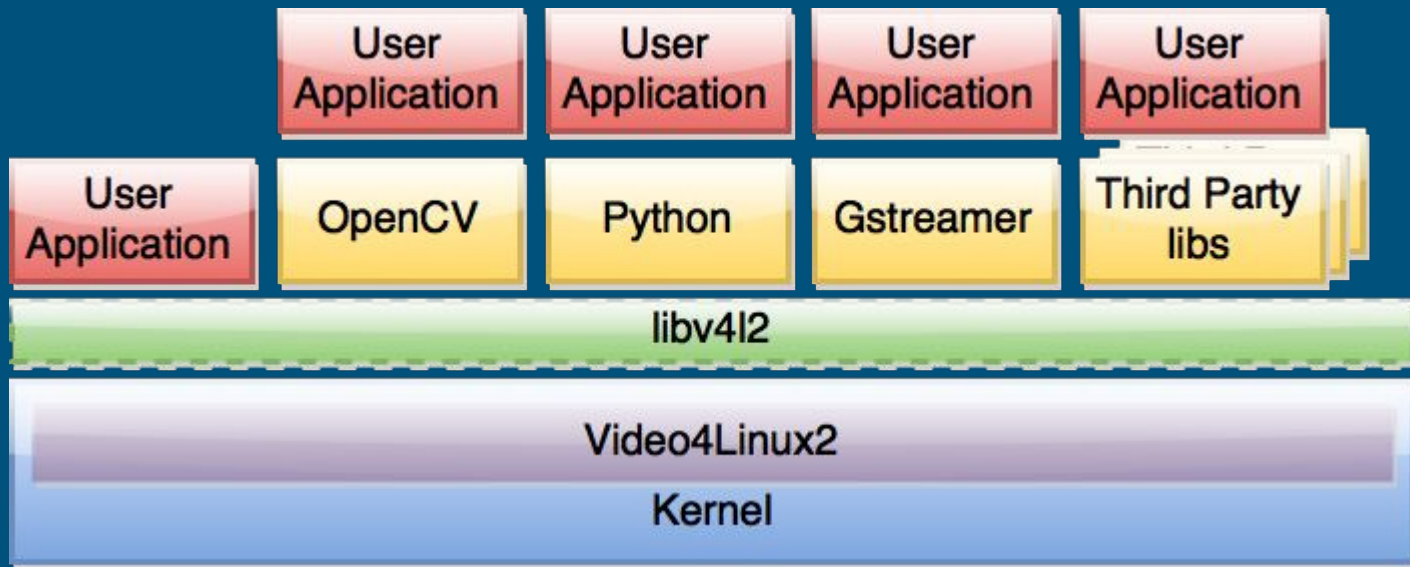

Modular Structure

Software

Original Contribution

Kernel

All Open Source

(except video drivers)

2 approaches:

- manufacturer tree
- upstream

Open Source Contributions

Linux Kernel: 172 contributions merged. Including a 9+ year old bug. 2nd Spanish Contributor by number of patches.

U-boot: 25 contributions. Maintainer of Virtex PowerPC boards.

Yocto project: 17 contributions. Supporting organization of the project.

v4l-utils/libv4l2: 7 contributions.

Flashrom: Support for the first board with EEPROM memory.

Gerbil: 2 contributions

Clpeak: 2 contributions.

Video Lan Client: 1 contribution.

Future Work

Image Processing Pipeline: High Level Synthesis

Processing Unit: Full Open source

Sensor Interface: USB3
